# Drought? Blame the Yo-Yo!

• 1933

Barrier Miner (Broken Hill, NSW : 1888 - 1954) (about) ◀ Monday 23 January 1933 ▶

## YO-YO BANNED IN SYRIA

### Blamed For Drought By Moslems

BEIRUT (Syria), January 21.

Drought and severe cold is disastrously affecting the cattle in Syria, and the Moslem chiefs at Damascus have attributed the wrath of the heavens to the recent introduction of the yo-yo.

They say that while the people are praying for rain to come down from above the yo-yo goes down, and before reaching the ground springs up through the subtle pull of the string.

The chiefs interviewed the Prime Minister and exposed the evil influence of yo-yos, so they were immediately banned.

To-day the police paraded the streets and confiscated the yo-yos from everyone they saw playing with them.

## Global warming will make Earth spin faster

Of all the possible ways in which climate change could affect our planet, this is the most bizarre: as the oceans warm up, Earth will start rotating a wee bit faster, reducing the length of a day.

The time it takes for Earth to complete one rotation is affected by anything that changes the distribution of the planet's mass relative to its axis of rotation.

## Snowfalls are now just a thing of the past

BY CHARLES ONIANS | Monday 20 March 2000

Britain's winter ends tomorrow with further indications of a striking environmental change: snow is starting to disappear from our lives.

Sledges, snowmen, snowballs and the excitement of waking to find that the stuff has settled outside are all a rapidly diminishing part of Britain's culture, as warmer winters - which scientists are attributing to global climate change - produce not only fewer white Christmases, but fewer white Januaries and Februaries.

Workers remove snow from a runway at O'Hare International Airport on February 3, in Chicago, Illinois. Climate change is not only making the planet warmer, it is also making snowstorms stronger and more frequent, US scientists said on Tuesday.

Climate change is not only making the planet warmer, it is also making snowstorms stronger and more frequent, US scientists said on Tuesday.

"Heavy snowstorms are not inconsistent with a warming planet," said scientist Jeff Masters, as part of a conference call with reporters and colleagues convened by the Union of Concern Scientists.

"In fact, as the Earth gets warmer and more moisture gets absorbed into the atmosphere, we are steadily loading the dice in favor of more extreme storms in all seasons, capable of causing greater impacts on society."

# Climate change makes wet places wetter and dry places drier...

Wet regions getting wetter, dry regions drier as planet warms

Chunlei Liu and Richard P. Allan

Dept of Meteorology/NCAS-Climate, University of Reading

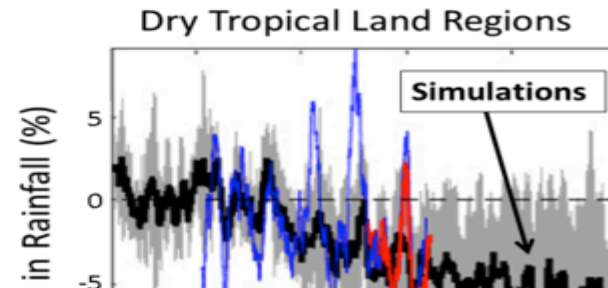

Richard Allan is a lecturer at the Department of Meteorology in the University of Reading. He works on the global water cycle and how this may change in the future.

## Unusual Drought in Thailand Makes High Vulnerability to Climate Change Evident

7/15/15 | Earth Day Network | 0 comments

Thailand is experiencing a peculiar dry season this year. The country's climate is characterized by a hot season, a dry season, and a monsoon season. However this year's dry season is compromising the water reserves of Thailand's capital, Bangkok.

Most of the drinking water that supplies the more than 14 million people in Bangkok is from the Chao Phraya River. The river springs in the city center and flows into the Gulf of Thailand, but during droughts seawater can run upstream, [increasing the river's salinity and preventing the purification of the water](#) by the local water company – unable to treat salty water.

## Less rain in a warmer world

**Global warming and pollution could give us drier days.**

Philip Ball

Most researchers say a warmer world will be a wetter one. But a new study into the effects of pollution hints that we could be in for a dry spell.

The general theory is that as temperatures rise, **more water** evaporates from the seas and so there is more rain - much of which will fall on land. Other effects, such as how plants react to high levels of carbon dioxide, are also predicted to make the world a wetter place.

Climate change could bring

## Hurricanes Have Doubled Due to Global Warming, Study Says

John Roach  
for National Geographic News  
July 30, 2007

The number of Atlantic hurricanes that form each year has doubled over the past century and global warming is largely to blame, according to a new study.

The increase occurred in two major steps of about 50 percent each, one in the 1930s and the second since 1995.

"It hasn't been a steady, gradual increase," said Greg Holland, a scientist with the National Center for Atmospheric Research in Boulder, Colorado.

- **'Families would have to get used to only using power when it was available'**

## Era of constant electricity at home is ending, says power chief

• The days of permanently available electricity may be coming to an end, the head of the power network said yesterday.

Families would have to get used to only using power when it was available, rather than constantly, said Steve Holliday, chief executive of National Grid. Mr Holliday was challenged over how the country would "keep the lights on" when it relied more on wind turbines as supplies of gas dwindled. Electricity provided by wind farms will increase six-fold by 2020 but critics complain they only generate on windy days.

Mr Holliday told Radio 4's *Today* programme that people would have to "change their behaviour". "The grid is going to be a very different system in 2020, 2030," he said. "We keep

thinking that we want it to be there and provide power when we need it. It is going to be much smarter than that.

"We are going to change our own behaviour and consume it when it is available and available cheaply."

Mr Holliday was speaking ahead of a speech last night to the Royal Academy of Engineering, in which he warned that the government was "looking more to communities and individuals to take power into their hands".

He also warned that pylons would still be used to carry power cables across the countryside because it was 10 times more expensive to bury them.

"As a society, we all need to be clear about what we can and cannot afford," he said.
